Today's best HP Gaming Pavilion 15-dk0046nr deals with a GP Pavilion gaming laptop... \$909 HP Gaming Pavilion 15-dk0046nr is an entry-level gaming laptop with a powerful Intel Core i7 processor and Nvidia GeForce graphics processor, with flexible SSD and long battery life, all wrapped in a striking, pretty portable design. However, the dim, somewhat dull display makes the laptop and gamers a great disservice. However, its combination of specs, power and endurance has earned the laptop a place on our best cheap gaming laptops under \$1,000 pages. HP Gaming Pavilion 15-dk0046nr Price and OptionsThe \$799 base model HP Gaming Pavilion 15-dk0046nr has an Intel Core i5-9300H processor, 8GB of RAM, 256GB of PCIe NVMe M.2 SSD and Nvidia GeForce GTX 1050 GPU with 3 VGRAM. The \$909 model we reviewed, 15-dk0046nr, has an Intel Core i7-9750H processor with 12GB of RAM, 256GB of PCIe NVMe M.2 SSD and Nvidia GeForce GTX 1660 Ti GPU with 6GB of VRAM. DesignOne thing for sure - the pavilion doesn't look like a typical gaming laptop. Instead of a tired black-and-red motif, the laptop has black with emerald accents. And if you really want to step off the beaten track, you can get the system with purple flourishes. The opening of the laptop shows a green backlit keyboard with some funky polygon-shaped speakers. (Image credit: Laptop Mag) In addition to pure aesthetics, the design of the laptop also has practical flaws. For example, the tiny, thin size of the power button made it uncomfortable to use. The HP Gaming Pavilion 15-dk0046nr weighs 5 pounds and measures 14.2 x 10.1 x 0.9 inches. It's lighter than the Acer Nitro 5 (5.7 pounds, 15.9 x 11.1 x 1.1 inches) and the Dell G5 15 SE (5.6 pounds, 14.2 x 9.9 x 0.8 inches). However, the 14.2 x 9.9 x 0.8-inch Asus ROG Marshmallow G GA502 is the lightest system at 4.5 pounds. Ports There is a decent number of ports on Pavilion 15. (Credit Image: Mag Laptop) On the left side of the laptop is a USB 3.1 Type-A port, a USB 3.1 Type-C port, an HDMI port, an Ethernet RJ-45 port and an SD media reader. (Image credit: Laptop Mag) On the right side you'll find two more USB 3.1 Type-A ports and headphone jacks and power. DisplayThe HP Gaming Pavilion 15's 15.6-inch, 1920 x 1080 screen is not the brightest or most colorful, but it has managed to deliver good image quality nonetheless. To test this, I watched the first trailer for Star Wars: The Rise of Skywalker. I could see parts of Rey's lightsaber clear, the desert environment of the trailer looked clear, and the finer details during the action scene (like the intense bright green fire blaster) really popped up. (Image credit: Laptop Mag) I also played Shadow Tomb Raider and left impressed with how good the game is Ancient tombs of the Icahn game looked magnificent with outstanding lighting and brilliant stone works. From torch tombs to lush green jungles, tomb Raider's latest game was a pleasure to eye when experienced through the screen of this laptop. In terms of brightness, the pavilion fluctuates compared to the competition. It averages 241.2 nits, which pales in comparison to Acer Nitro 5 (275 nits), Dell G5 15 SE (270 nits) and category average (264 nits). It only takes a little better than the Asus ROG Marshmallow G GA502 (240 nits). In addition, its share of sRGB range was 65.8%, which is lower than the percentage of sRGB Acer Nitro 5 (103%), Asus ROG Marshmallow (71%) and sRGB. However, it was only slightly below the entry-level average. Keyboard and TouchThepad keys on the HP Gaming Pavilion keyboard felt fast and responsive. Using the 10FastFingers input test, I was able to type 46 words per minute on an HP laptop keyboard, lower than my usual average. (Image credit: Laptop Mag) It was somewhat slower than how fast I usually type with a keyboard on my desktop computer at home, on which I average 51 WPM. The 2.4 x 4.6-inch touch panel delivered solid, elastic feedback. However, I think HP should've used the discrete mouse buttons since I constantly hit the wrong side of the touchpad when I wanted to left or right click. However, Windows 10 gestures worked smoothly. I had no problem using it to do what I needed and I wasn't experiencing any input delays. AudioAt full volume, I blasted the energetic, jazzy Super Mario Odyssey song Jump Up, Super Star, and the song came out loud and clear of the laptop Bang and Olufsen double speakers. I then checked how good Skyrim's more serious, operatic song Dragonborn would sound, and I wasn't disappointed. (Image credit: Laptop Mag) The song included loud trumpets, lyrics and a piano that clearly sounded from the speakers of the laptop. It sounded good to me, not at all muted. Gaming, Graphics and VRThe Pavilion 15 packs the Nvidia GeForce GTX 1650 GPU with 4GB of VRAM. On the highest laptop graphics settings (1080p with Ultra settings), modern graphic wonders such as Far Cry New Dawn and Hitman average 54 frames per second and 57 frames per second, respectively. Remarkably, it ran Far Cry New Dawn significantly better than the Nitro 5 (GTX 1650, 40 FPS) in the highest settings (although Hitman only ran a little worse on Acer at 56 FPS). (Image credit: Laptop Mag) When against Marshmallow (GeForce GTX 1660 Ti), Pavilion 15 is not holding as well. Asus ran Hitman Better (73 fps), Rise of the Tomb Raider better (43 fps vs. HP 29 fps), Shadow Tomb Raider better (36 fps vs. HP 31) and Grand Theft Auto V better (57 fps vs. HP 39 fps). Hp's gaming laptop also doesn't run Hitman nearly as well as the G5 15 (GTX 1650, 85 fps on 1080 with Ultra graphics). Now, in my personal experience, would still say that HP Gaming Pavilion 15 ran Shadow Tomb Raider very well on the highest graphic graphic Naturally, in linear, closed parts of the game, FPS will fluctuate between 40 to 60 when I crossed the linear parts of the game, but in more widely open hub areas such as Paititi, FPS will drop to the 30s to 40s range. The best PC games to play right now are the MagOn laptop in front of the virtual reality, this HP gaming laptop averages 5.9 fps on the SteamVR performance test. That's enough to top the 5.3 average, G5 15 and Nitro 5, which both average 5.6 fps. Asus continued to dominate, with the result 9.2.Performancel decided to put the Pavilion 15 Intel Core i7-9750H processor for testing, playing 22 Google Chrome tabs, each playing a YouTube video running at 1080p. Several videos have frozen or struggled to play. But despite all this activity, I still played Shadow Tomb Raider with the frame rate falling only during the initial boot of the game. During the overall Geekbench 4.3 performance test, Pavilion 15 surpassed the G5 15 (16,722, i5-9300H processor), Marshmallow (14,106, AMD Ryzen 7 3750H) and Nitro 5 Core (11,603, i5-8300H processor) with a result of 21,326. HP also easily surpassed the 15,566 entry-level gaming laptop average. Pavilion 15 took 10 minutes and 42 seconds to transcode 4K video to 1080p. It's faster than the competition, and the average for the category is 14:28. The best performance graphics When it comes to file speed, HP Gaming Pavilion's 256GB SSD copied 4.97GB in 14.5 seconds, which is a transmission speed of 351 megabytes per second. This is better than the average of 307.2 MB/s, and the G5 15 (256GB M.2 PCIe NVMe SSD) 130.1 MBP. However, both the'phyrus (512GB M.2 PCIe NVMe SSD) and Nitro 5 (512GB SSD) laptops were faster, with scores of 424 and 535.7 Mbps, respectively. A LifeFor battery gaming laptop, even an entry-level system, hp Gaming Pavilion 15 has quite a long battery life. The system lasted 5 hours and 26 minutes on our battery test, which consists of continuous web surfing at 150 nits of brightness. It's only a second behind the 5:27 entry-level game average, but enough to surpass Marshmallow 4:48 and Nitro 5 in 4:22. However, the G5 15 lasted a stunning 6:53. WebcamAfter snapping four photos of myself with the HP Gaming Pavilion 15 webcam, I think I can safely say that the webcam is awful. (Image credit: Laptop Mag) The colors weren't inaccurate, but the light in the photos was pretty blown out. The light bulb turned on looked like a white ball. Each painting had this blurry, dirty quality for them. HeatI played 15 minutes of Shadow Tomb Raider on Pavilion 15, and when I did, it was pretty cool compared to other laptops. Our heat gun found that the touchpad was 96 degrees Fahrenheit, the middle of the keyboard was 94 degrees, and the bottom side of the laptop was 95 degrees. Not the hottest thing I've ever felt on a gaming machine in game, but still significant. Outside the touchpad, laptop toe line 95-degree comfort level. (Image credit: Laptop Mag) It should be noted that fans of the laptop can also get noticeably loud by playing graphically taxing games like Shadow Tomb Raiders for a long period. After cooling off, we remeasured the previous spots on the laptop after the launch of the 15-minute YouTube video. The touchpad, center and bottom of the laptop are recorded 78, 83 and 86 degrees, respectively. Software and WarrantyHP have downloaded Pavilion 15 with several manufacturer-branded software, including HP's introductory Program JumpStart.Third-party programs include McAfee LiveSafe, Simple Solitaire, Mahjong Candy, Adobe Photoshop Elements 2019, Paint 3D, Groove Music, Skype, Spotify, WildTangent Games launcher and laptop HP Pavilion 15-00 See how HP is away on our annual special reports including Tech Support Showdown, best and worst brands and best and worst gaming brands. Overall, the HP Gaming Pavilion 15-dk0046nr won't sleep on simply because it's a budget system. At \$909, the laptop packs some powerful specs including the Intel Core i7 processor and the Nvidia GTX 1660 GPU, which means the laptop can play games with good frame rate. And in almost 6 hours of battery life, it has the stamina to save. However, if you're looking for a slightly more graphic oomph, the \$1099 Asus ROG Marshmallow G GA502, which offers more energy and a better display. However, if you're looking for a surprisingly powerful entry-level system at a great price, the HP Pavilion 15 should be at the top of the list.
